Frame 2

A retrospective claims
analysis suggests:

>90%

of Cancer-Associated
LEMS with SCLC cases

may not receive
a LEMS diagnosis*

LEMS=Lambert-Eaton myasthenic syndrome.
*Based on retrospective US claims (2014-2022), SCLC was inferred using treatment proxies, and LEMS was identified through diagnosis codes. The observed diagnosis rate was 0.16% (0.19% sensitivity analysis). While US prevalence data is limited, historical non-US prospective studies estimate SCLC-LEMS as app. 3%-6%.
